

## Debate on the Citizen Assets Strategic Plan 2020-23

Since 2017, the Citizen Assets program has constituted the Citizen Assets Board within the technical organization chart of the Barcelona City Council, where public spaces are ceded to non-profit entities. It is a technical management space. With this Board and this program, it is possible to establish a relationship protocol between districts and city council areas to award and evaluate project proposals.

In the ULG, we have been developing collectively the Community balance and talking and how we could to evaluate the community practices; and also the Citizen Assets catalogue, where it is communicated the cession conditions of the facilities in a transparent way. The future challenges that Barcelona City Council presented to debate together with the ULG are:

- How we guarantee the access to a local by the entities that work at the city level? And how we incorporate the Civic Management of municipal facilities into the Citizen Assets program?
- Study the possibility of decentralizing the Citizen Assets Board at districts level, because these district boards discuss about award the facilities to non-profit entities.
- Establish a work plan for the formal Constitution of this space of participation (ULG) within the formal organs of the City Council of Barcelona
