

The waiting list

In the last 10 years Barcelona has received hundreds of requests from social entities to access a municipal asset. Some have been resolved and now are increasing the number of associations in the Citizen Assets Program. Nevertheless, there are almost 200 requests without a positive answer. These requests are increasing the waiting list. Almost all these social and communer projects are viable. Most of them are already active in private properties or sharing provisional spaces in local facilities.

One of the objectives of Citizen Assets Program is to give answers to part of this waiting list. Until now, we have generated an important number of requests without making publicity of the program. This will change. At the moment that this program is going to be public and publicize it, something that will happen next summer (2021), the forecast is that the number of formal petitions will increase dramatically. Something that will affect all areas and territories of Barcelona city and will generate an increase of requests.

In the next months will be important to increase the resources to reply and satisfy the citizenry needs. In different aspects. Firstly, put order in the properties catalogue (and their features and characteristics). This will generate the possibility to find empty spaces or spaces with low levels of use. Secondly, collaborate with other public administrations (as Regional government and their areas or state government) to fill these spaces and properties that remain empty in a lot of neighborhoods.
